

niepodległa

**In 2018, Poland is celebrating
the 100th anniversary of *independence*.**

**The Jubilee has historically been an occasion
for Poles to bond, despite the dynamically
changing personal views – a characteristic
of a democratic society.**

**Implementation of the 4th phase
of the National Programme on OSH**

***Improvement of Safety
and Working Conditions***

Prof. Danuta Koradecka, Ph.D., D.Med.Sc.
Director
Central Institute for Labour Protection – National Research Institute
(CIOP-PIB)

**Polish-German OSH Dialogue 2018
Görlitz, 14-15 November 2018**

Outline

- **Data on working conditions**
- **System of labour protection in Poland**
- **Research in occupational safety and health (National Programme)**
- **Conclusions**

Working conditions in Poland in 2017

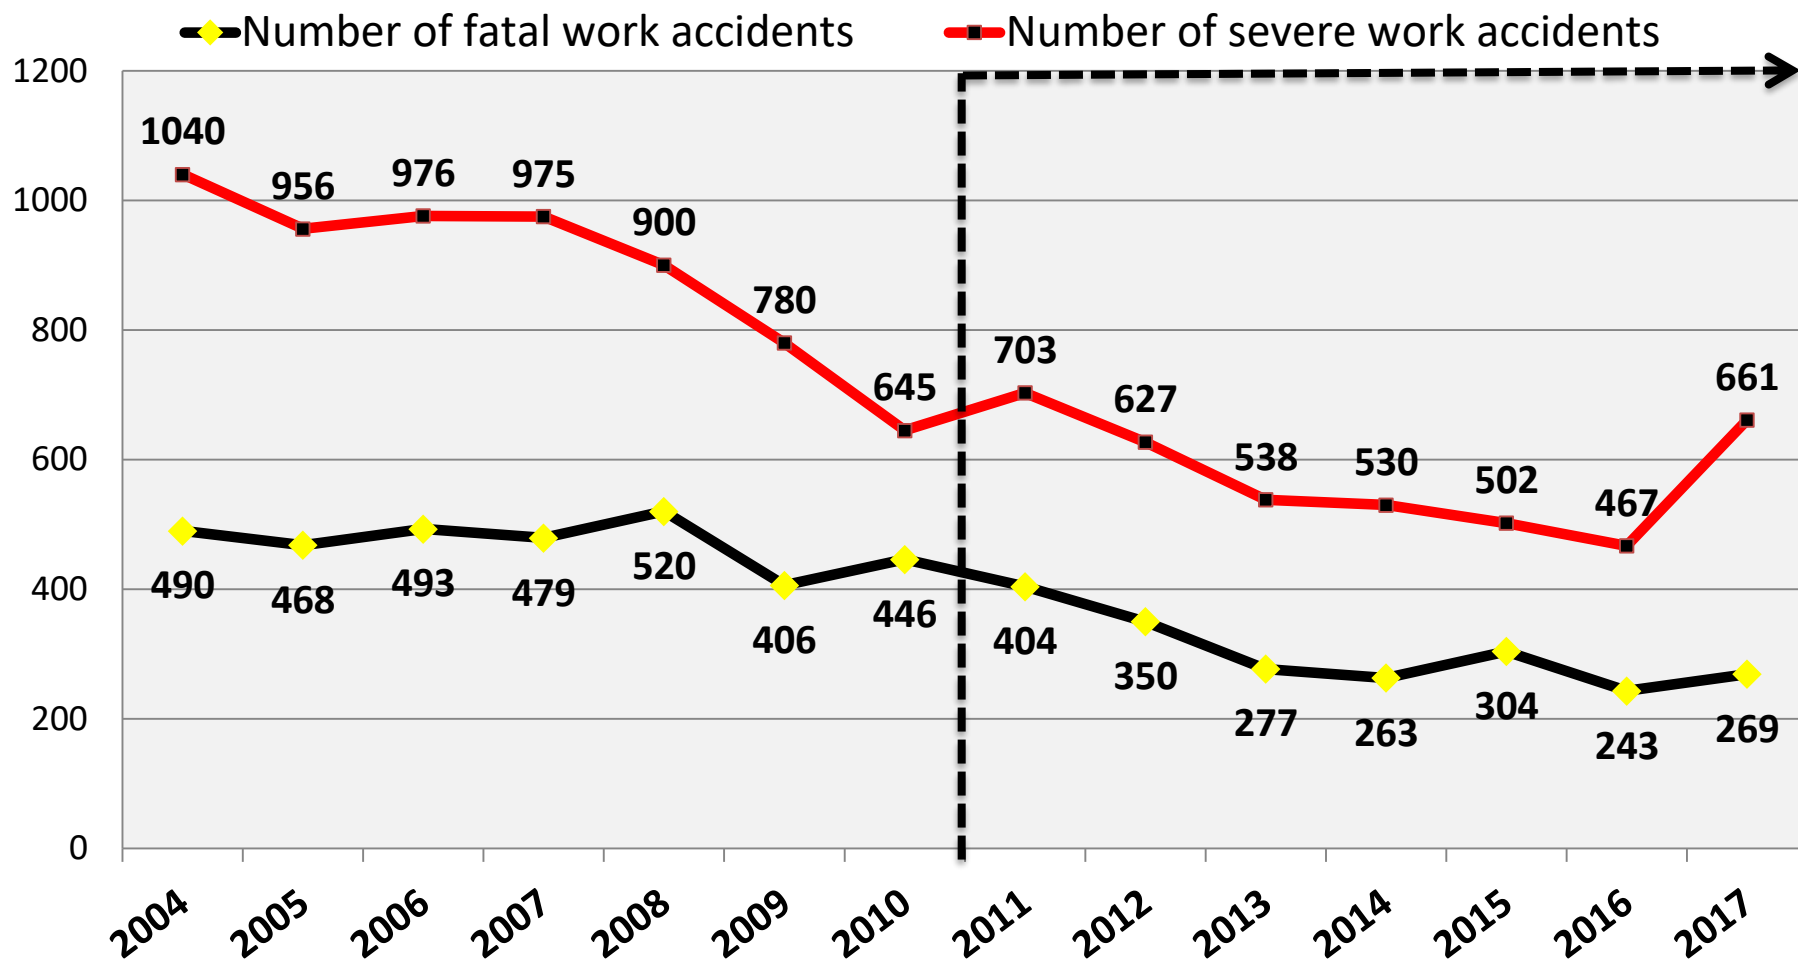

88 330 employees injured in accidents at work,
including:

661 serious accidents

269 fatal accidents

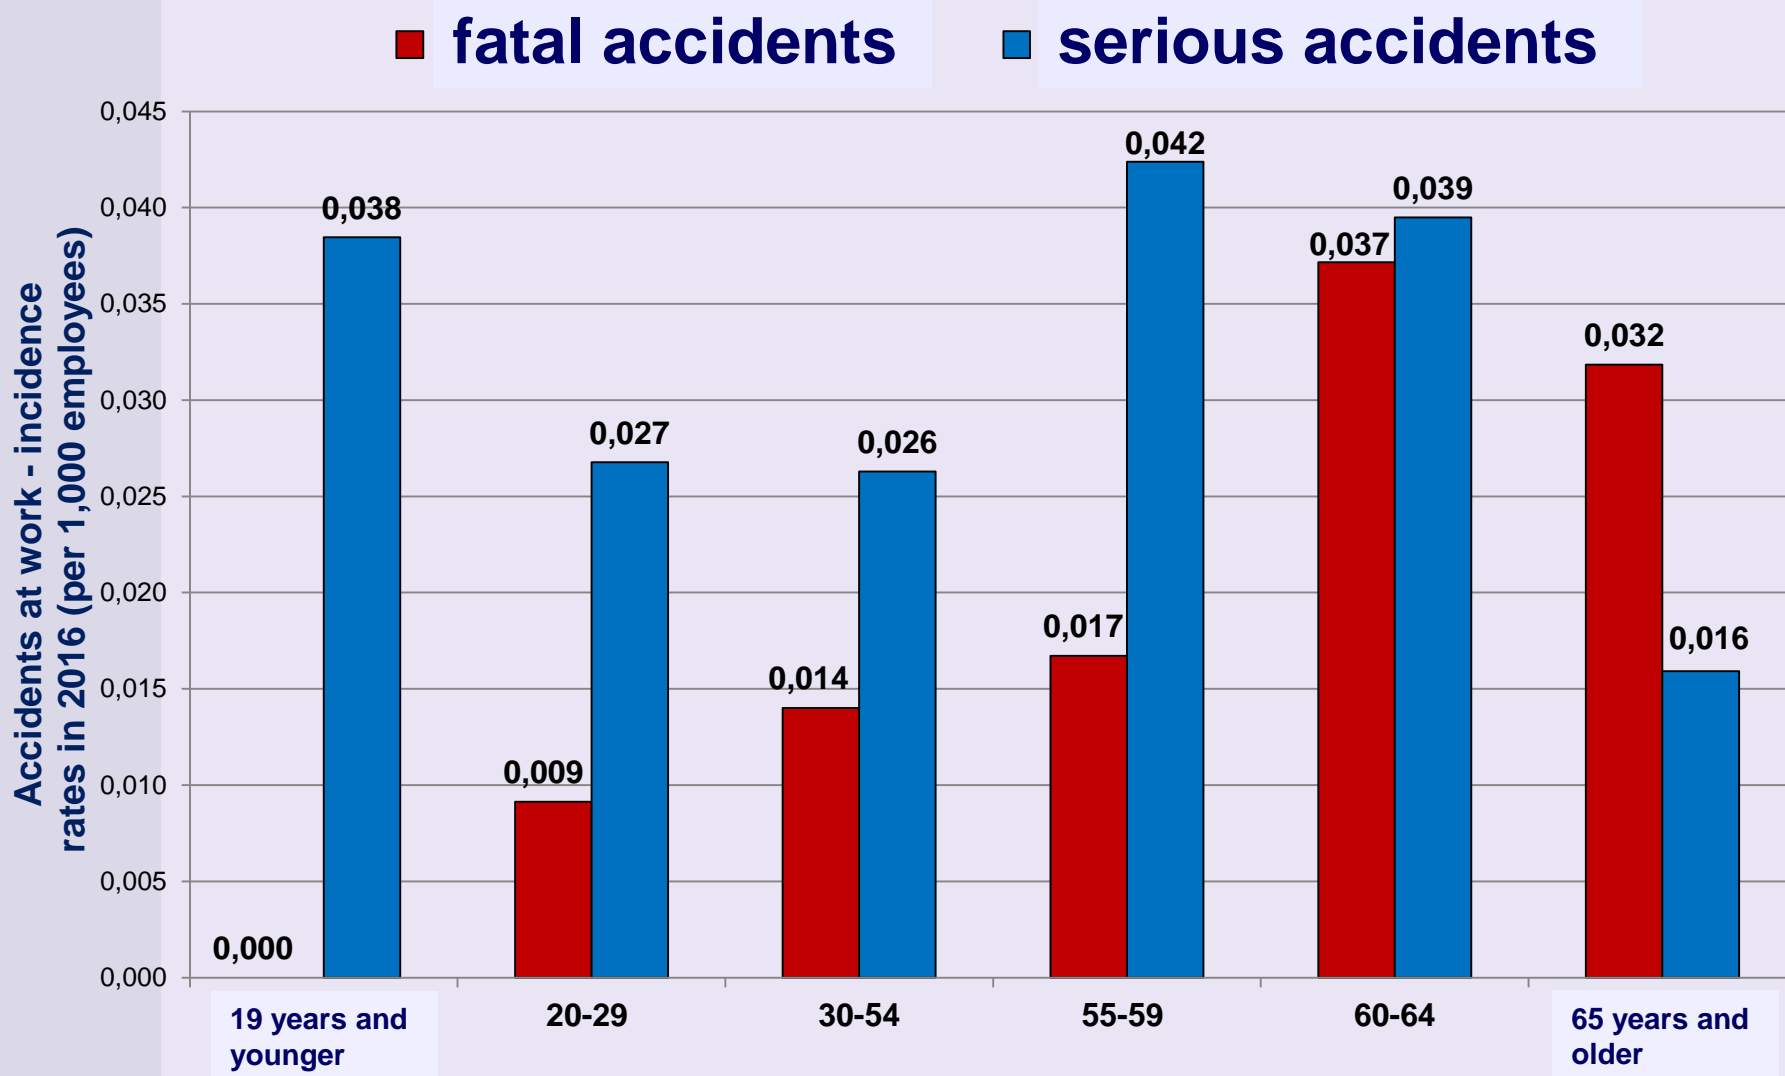

Number of severe and fatal work accidents in Poland in 2004 – 2017

Source: CIOP-PIB according to data from GUS

Accidents at work – incidence rates per 1,000 employees

Incident rate of fatal accidents for EU countries (per 100,000 employees) (2015)

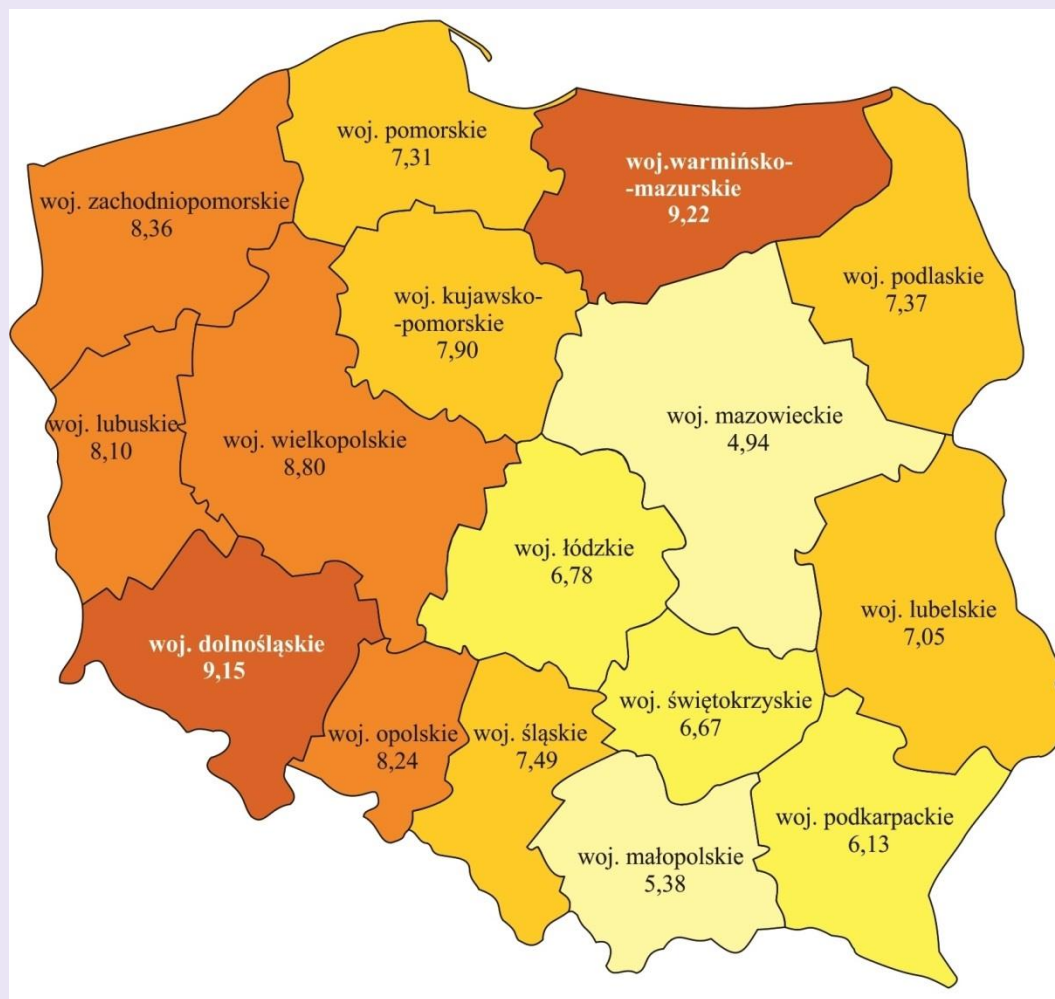

Working conditions in Poland

Workers employed in hazardous conditions and recognized occupational diseases in Poland in 1987 – 2016 (per persons in employment)

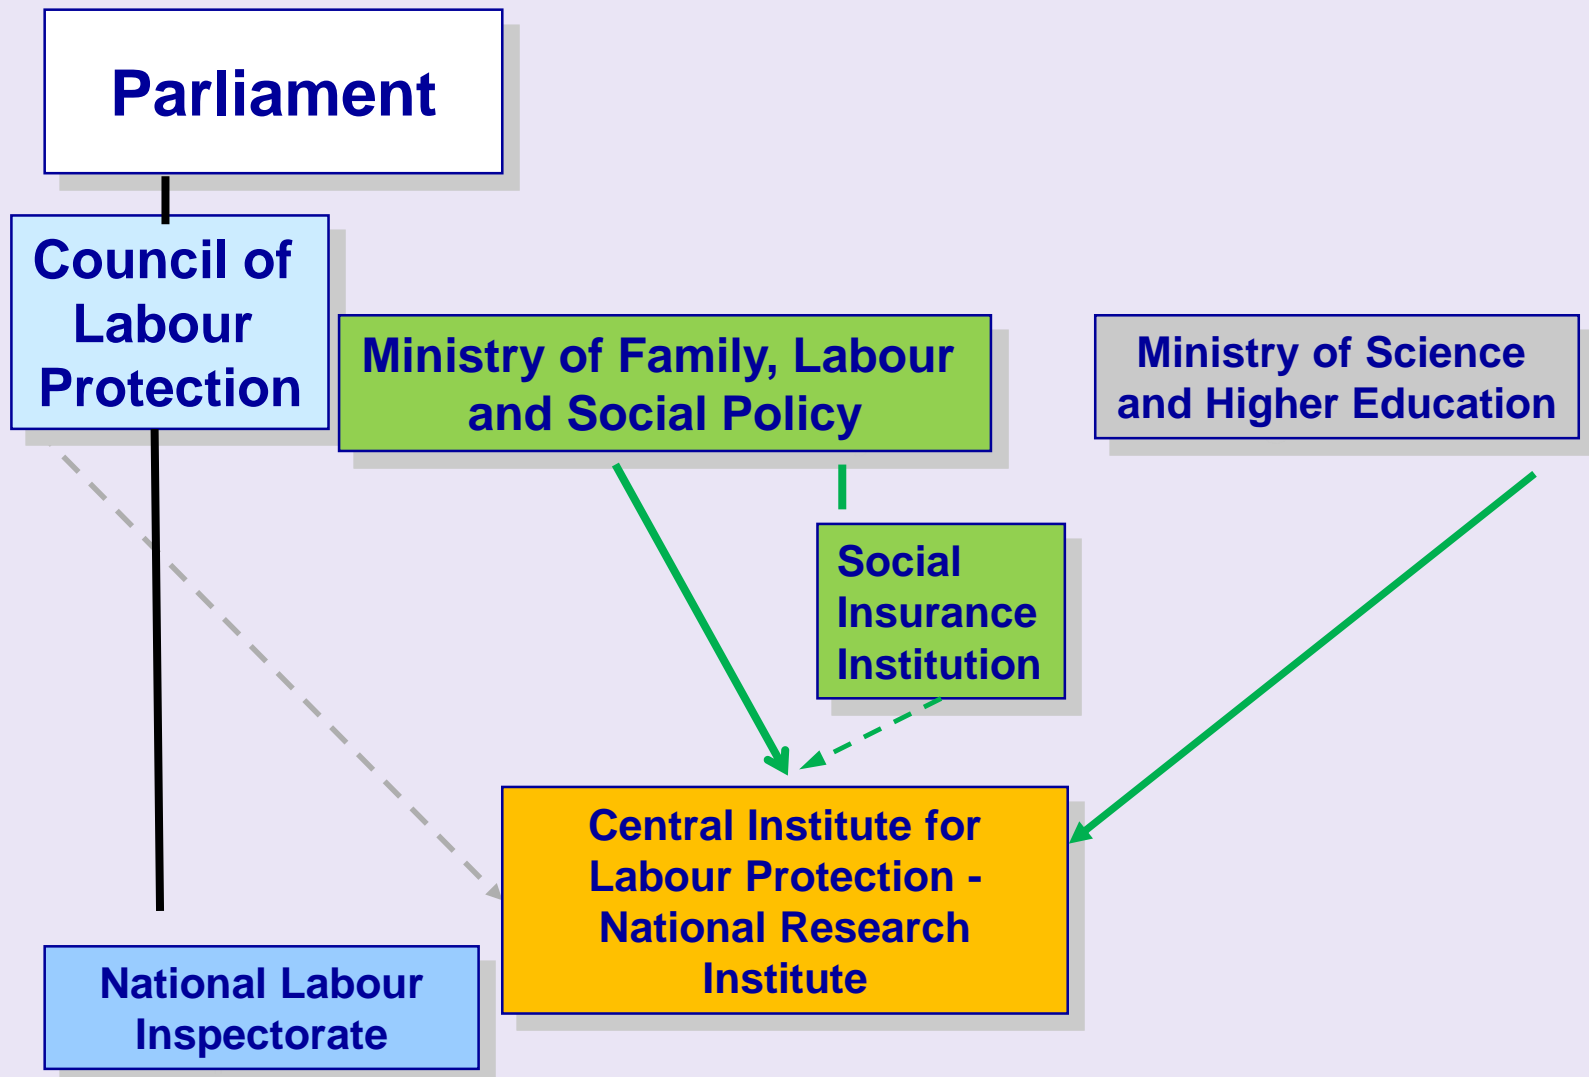

Injured in accidents at work per 1,000 employees in Poland without individual farms in agriculture (2016)

System of labour protection in Poland

The Institute's position in the labour protection system in Poland

OSH supervision and inspection bodies

- **National Labour Inspectorate**
- **State Sanitary Inspection**
- **Specialist supervision:**
 - **State Mining Authority**
 - **Office of Technical Inspection**
 - **General Office of Building Control**

Legal status of the Institute

- The Central Institute for Labour Protection was **established** by an act of law of **4 April, 1950**
- Since 1973 the Institute has functioned under **Minister of Labour and Social Policy**
- In 2002 the Institute was granted the status of a **National Research Institute** (Resolution of the **Council of Ministers** of 5 November 2002)

National Programme

Improvement of Safety and Working Conditions

The National Programme takes account of the thematic areas proposed by the various ministries, the inspection bodies for working conditions and representative employers' and workers' organisations.

Established by: **The Council of Ministers**

Proposer:

Minister of Labour and Social Policy

Cooperation in research and development:

Minister of Science and Higher Education

Main performer and coordinator:

**Central Institute for Labour Protection – National
Research Institute**

Main objective

The main objective of the programme is **to develop innovative technical and organisational solutions**, aimed at developing human resources, new products, technologies, management techniques and systems, **which will help to reduce the number of workers exposed to harmful, dangerous and difficult factors**, and reduce the number of work-related accidents, occupational diseases and **consequent economic and social losses.**

Strategic objectives:

- ❑ Reducing the number of workers employed in hazardous conditions by **30%** (resulting in longer occupational activity)
- ❑ Reducing the burden of the Social Insurance Fund (ZUS) by **at least 25 %** (lower expenses from the Accident Insurance Fund)
- ❑ Reducing total social costs of accidents at work by **at least 1%** per year (savings of ca. 350 million PLN per year)

Tasks related to the services of the state

Group 1.

Establishing OSH standards

Group 2.

Developing methods and tools for the prevention and reduction of occupational risk in the workplace

Group 3.

Developing a system to test machinery, technical equipment, and tools as well as personal and collective protective equipment

Group 4.

Developing a system for OSH education, information and promotion.

Research and development tasks

Area I

Maintaining work ability

Area II

New and emerging risks related to new technologies and work processes

Area III

Materials engineering and advanced technologies for health and safety at work

Area IV

Developing a safety culture

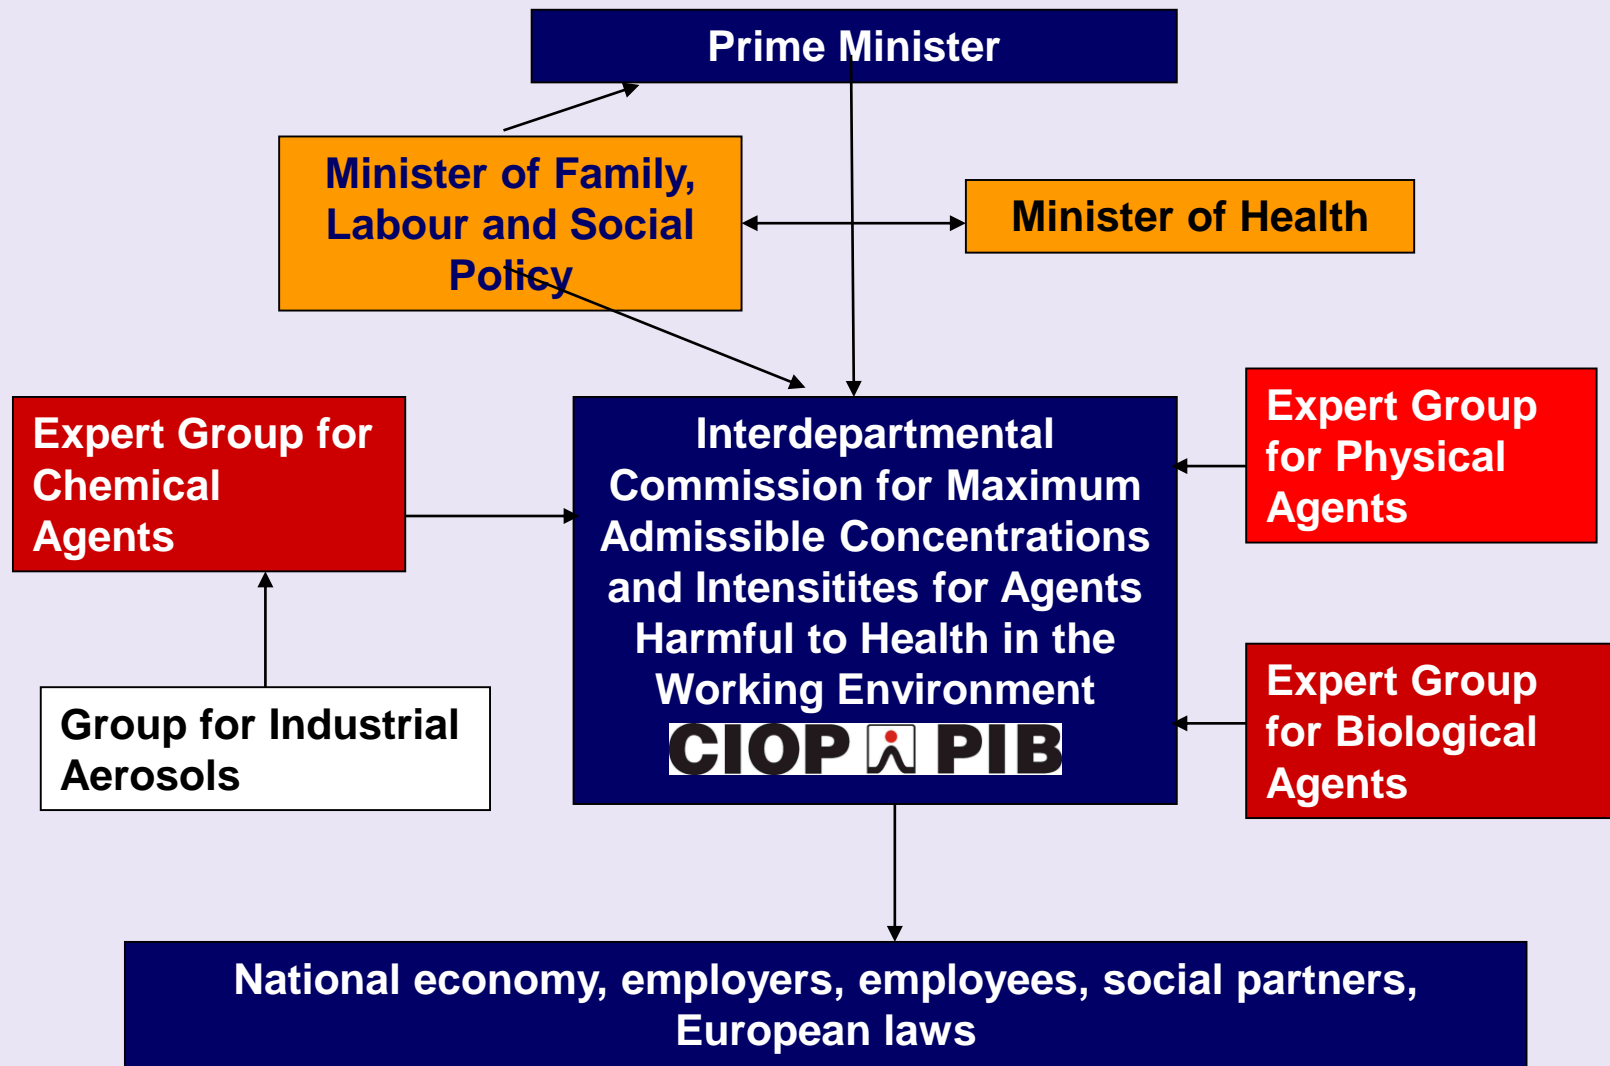

Specific objectives of the Programme

- 1) **fulfilment of basic requirements** included in legal regulations on occupational safety and health adapted to **the European Union provisions**,

Setting and review of maximum admissible concentration (MAC) levels of harmful agents in the working environment in Poland

Establishing and verification of maximum admissible concentrations of harmful to health agents in the working environment in Poland (31.01.2018)

The number of current standards developed until 2015 by technical committees acting at CIOP-PIB

Technical Committee	Number of standards
TC no. 21 for Personal Protective Equipment	173
TC no. 157 for Physical Hazards in Work Environment	68
TC no. 158 for Safety of Machinery and Technical Equipment and Ergonomics - General Problems	48
TC no. 159 for Chemical and Aerosol Hazards in Working Environment	314
TC no. 276 for Occupational Safety and Hygiene Management	4
TC no. 305 For Social Responsibility	1
Total	608

The number of standards not translated into the Polish language developed by technical committees at CIOP-PIB

206

CIOP-PIB accreditation for testing and certification

No.	Accredited area	Since	Accreditation no.
1.	Testing laboratories	1995	AB 038
2.	Calibration laboratories	2004	AP 061
3.	Certification of products (machinery, personal and collective protective equipment)	1994	AC 018
4.	Certification of OSH management systems	2000	AC 069
5.	Certification of person's competences	2000	AC 071

Regulations issued in Poland thanks to the results of the National Programme 2017 - 2019

1. Regulation of the Minister of Development and Finance of 15 December 2017 on the safety and health at work in the use of powered industrial trucks (Dz. U., poz. 47)
2. Regulation of the Minister of Family, Labour and Social Policy of 12 June 2018 maximum admissible concentrations and intensities of agents harmful to health in the working environment (Dz. U., poz. 1286)

Regulations issued in Poland thanks to the results of the National Programme 2017 - 2019

3. Regulation of the Minister of Family, Labour and Social Policy of 25 April 2017 amending the Regulation on health and safety at work in manual handling operations (Dz. U. poz. 854).
4. Regulation of the Minister of Family, Labour and Social Policy of 23 December 2016 amending the Regulation on health and safety at work related to exposure to electromagnetic fields (Dz. U. poz. 2284 and 2017 poz. 1276)

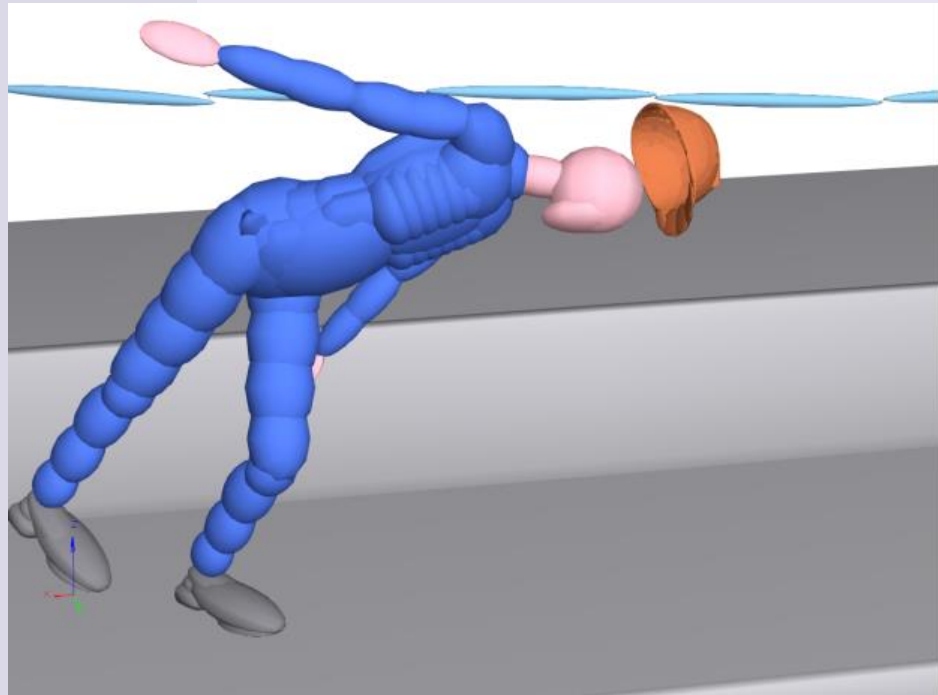

2) provision of **special protection for persons working in high-risk economy sectors**

Technical solutions (examples)

RECONSTRUCTION OF ACCIDENTS AT WORK

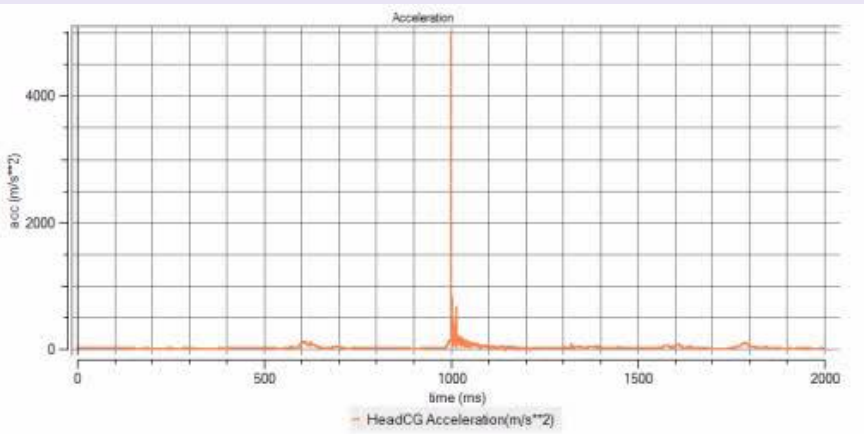

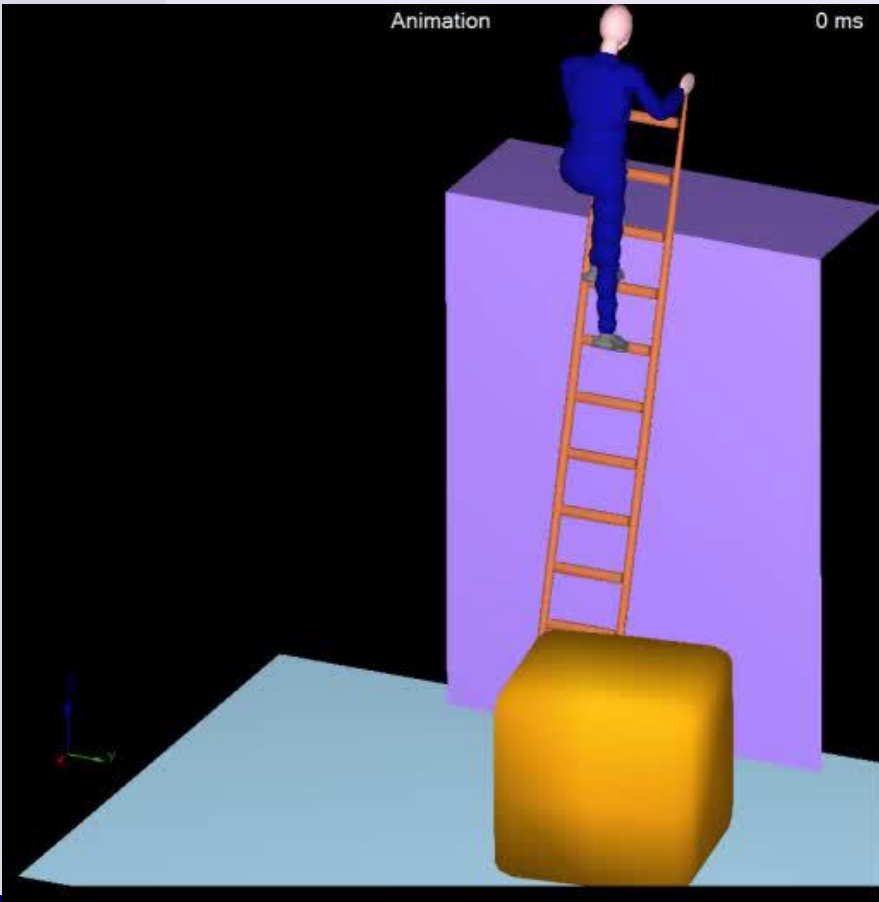

Calculation of acceleration of the head as function of falling time

Reconstruction of fall from a ladder using numerical methods

Diagrams present acceleration and velocity of the victim's head

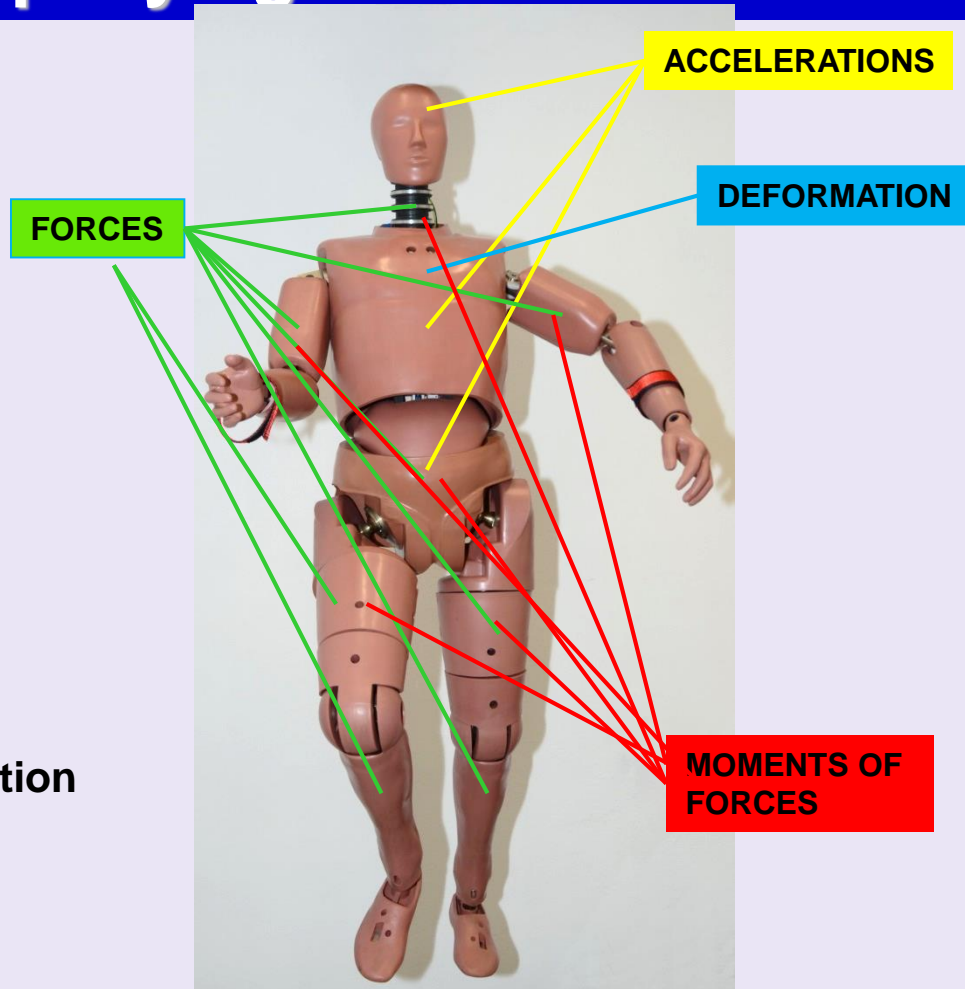

Reconstruction of the accident when leaving the cabin of a tracked bulldozer - computer visualization

Experimental station for studying mechanical phenomena accompanying a fall arrest

Experimental station

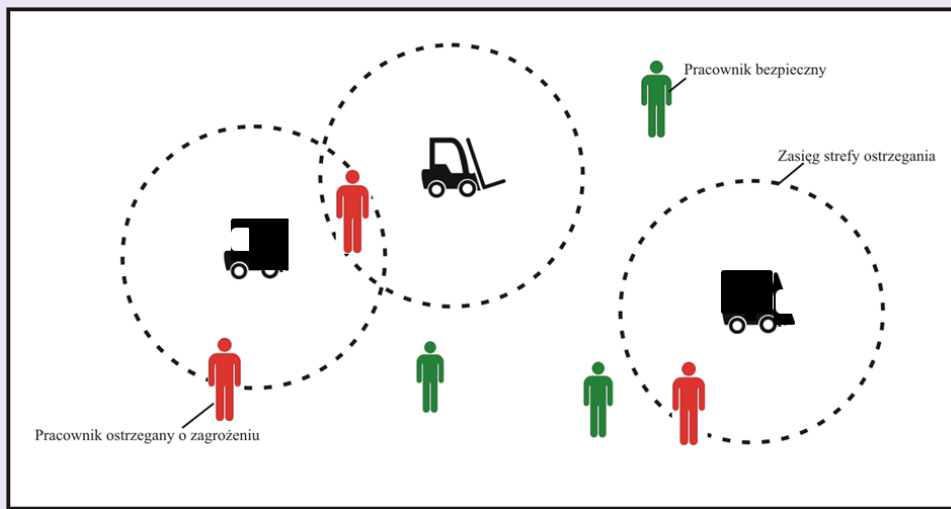

Anthropomorphic dummy equipped with internal data acquisition system.

Example of phases of pendulum movement of a manikin equipped with a lanyard and safety harness

Warning system for persons using hearing protectors against approaching vehicles

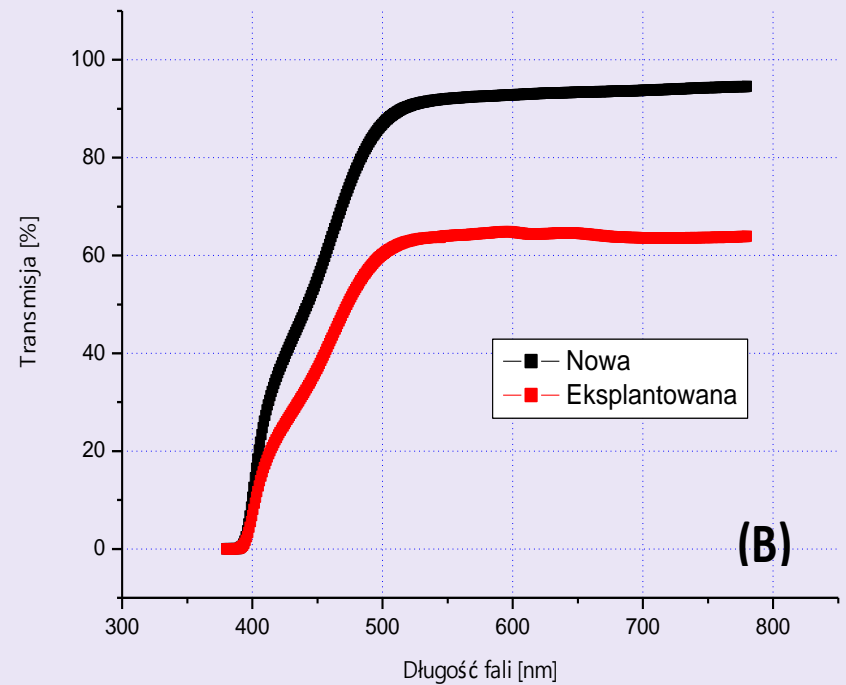

Warning system supported by:

- signal transmitters to be placed on vehicles
- receivers (with alarm function) in workers' smart wearables

Colour assessment during viewing through optical protective filters, including IOL

*Phacoemulsification cataract removal procedure (A)
and examples of IOL lens transmittance characteristics (B)*

The concept of data processing about physiological parameters of a firefighter and potential hazards in the workplace in the cloud computing

Sensor data

The cloud computing

After processing data in the cloud, information about health and detected changes are generated.

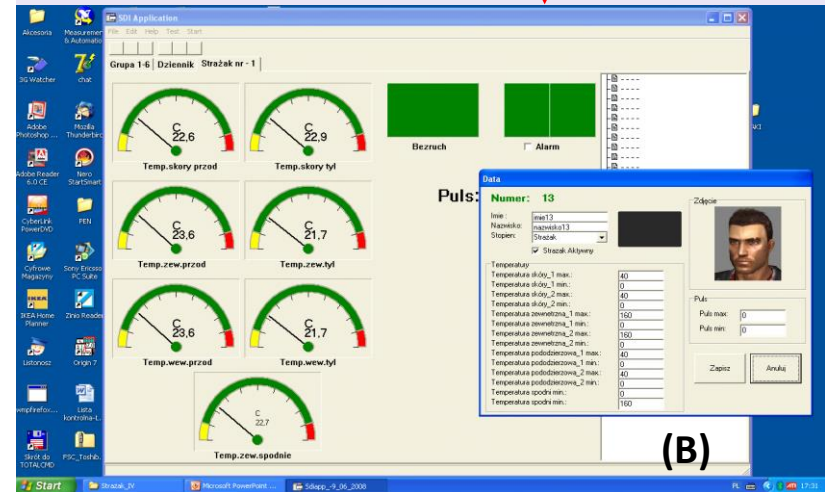

Sensor module for measuring selected physiological parameters

Sensor module for measurement of concentration of selected chemical substances of external temperature

Wireless communication module

Sensor module for measurement of concentration of selected chemical substances of external temperature

Assessment model of combined influence of **whole-body** and **hand-arm** vibration in the working environment

Certain part of vibroacoustic energy (E) influencing the driver is not taken into account when individual factors are estimated separately.

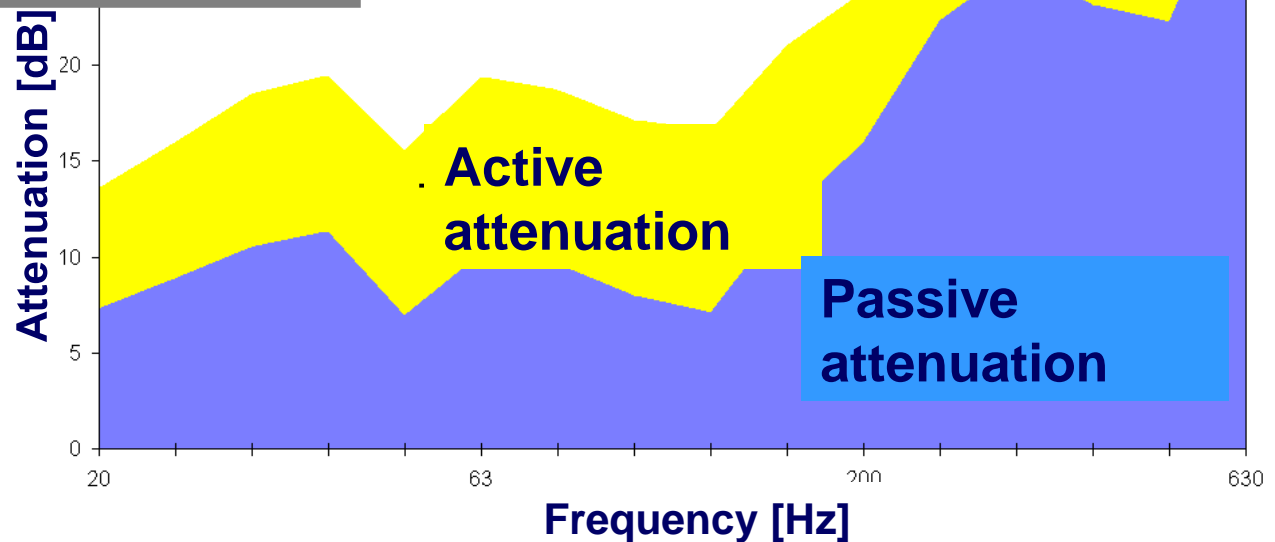

Active hearing protector (type: AOS-2)

Basic technical parameters:

- active reduction level ca. 10 dB between 20 - 600 Hz

Efficiency of active noise reduction of AOS-2

New systems of intumescent flame retardants with plastics

Phosphate (V) di-(melamine phosphate) copper (II)
CUMP

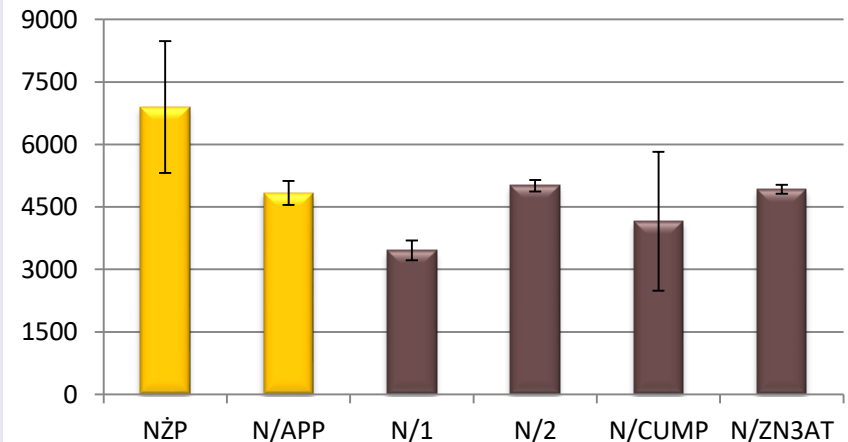

The flame retardant substances were characterized by the formation of a carbonization layer, which reduced flammability and smoke emission from the investigated plastics (unsaturated polyester resin and epoxide resin).

Maximum heat release speed, kW/m²

Total quantity of smoke, m²/m²

Assessment of cytotoxic effects of selected nanomaterials used in dry lubricants

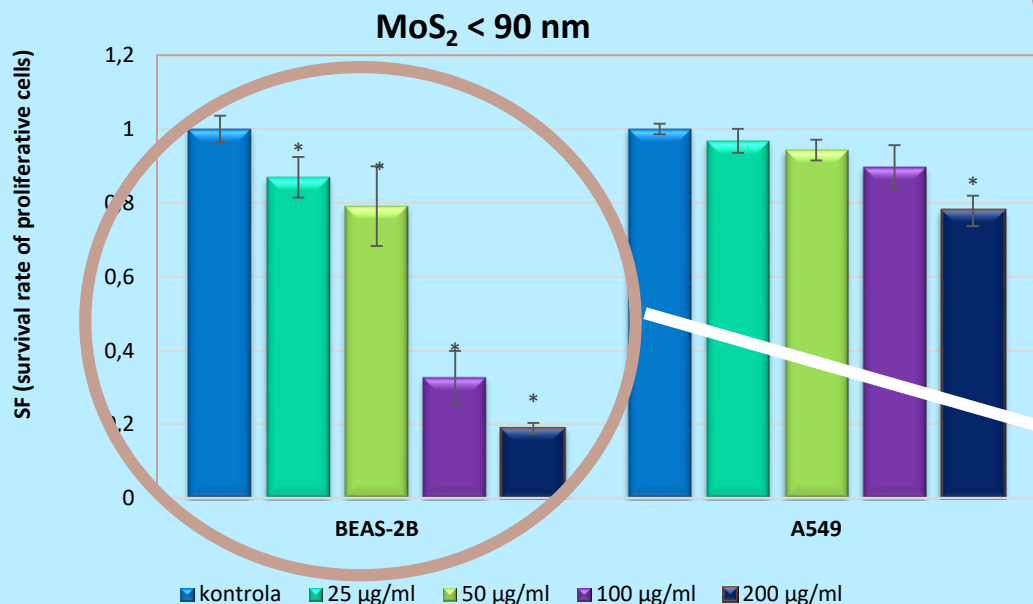

Molybdenum disulfide
< 90 nm

Tungsten disulfide
< 90 nm

molybdenum trioxide
< 100 nm

- induction of inflammation
- inhibition of the ability to divide and colonise correctly

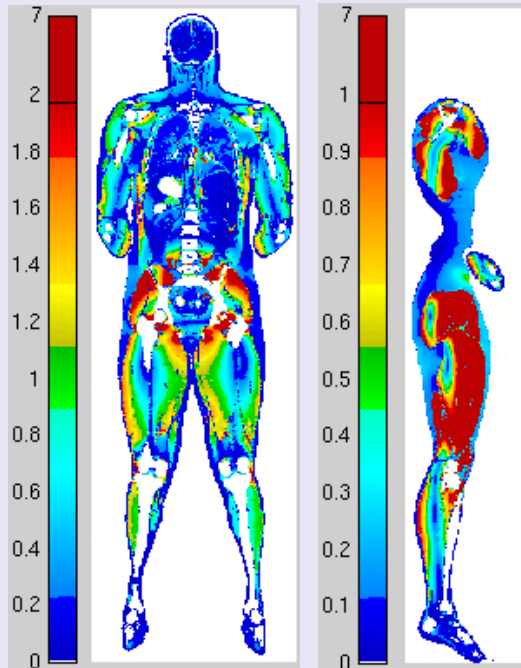

Development of requirements, test methods and a programme for the selection of respiratory protective equipment against nanoparticles

Sample applications of computer dosimetry for analysing internal exposure measures

Internal exposure measures for electromagnetic fields:

- Specific absorption rate (SAR)
- Current density (J)

A method for testing electromagnetic threats in libraries, educational and commercial institutions using wireless communication devices (WiFi) or identification devices (RFID) has been developed.

a)

b)

Distribution of local SAR energy absorption rate values in the numerical model of the head of the user of the hearing implant (a) and the worker without the implant (b) - the highest SAR values in red

Tests of electromagnetic hazards during electrothermal food processing and rules for the use of protective equipment

Numerical model and results of simulation of the distribution of electric field of 40 kHz intensity induced in tissues of an insulin pump user working with an induction cooker

Virtual reality training application

Group cooperation training - fire department

Fire-fighting actions in a building

Rescue action in the car accident

Virtual reality techniques at CIOP-PIB

Vehicles and machines simulators (e.g. self-propelled mining machines)

Training in performing particularly dangerous works, including officers of uniformed services

Awards and distinctions for the products of the multiannual programme achieved in 2017

Competitions and exhibitions	Number of awards and distinctions
international	2
national	4

Social innovations developed by CIOP-PIB

Assessment of workers' neuro-muscular system efficiency in a daily cycle

- Morning sessions 7.00 - 9.00
- Night sessions 1.00 - 3.00
(15 people = 80 measurement sessions)

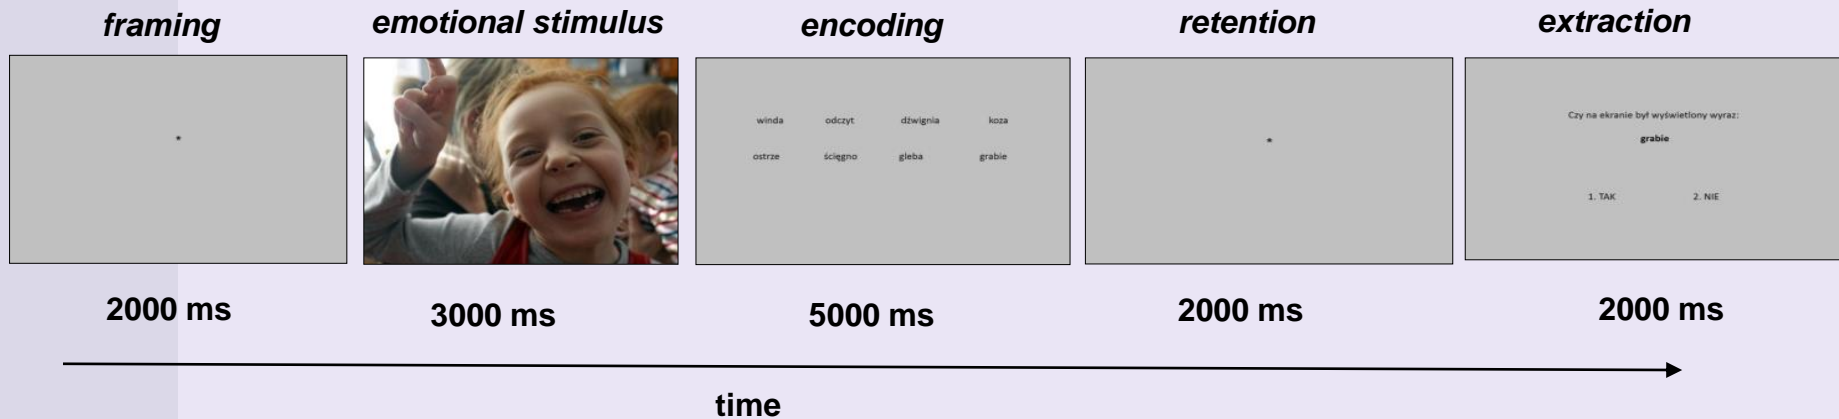

STABILITY INDEX IN THE SENSORY INTEGRATION TEST

MAXIMUM TORQUE FOR ANGULAR VELOCITY 60 %S

Development of indicators differentiating the impact of stressful situations on visual perception and the EEG signal waveform of people examined during mental work.

Higher amplitude of the potential response to a negative picture.
(N 100)

A close-up photograph of a person's hand resting on the rim of a wheelchair wheel. The person is wearing a grey sweater. The background is slightly blurred, showing an outdoor setting. A grey parallelogram callout box with a purple border is positioned in the upper right quadrant, containing the word 'Breakthrough!' in pink text.

Breakthrough!

WORK PASSPORT

Work ability - a balance between employee's abilities (health condition, functional abilities, skills and competences) and work demands

(Ilmarinen J., Tuomi K. 2004)

WORK PASSPORT

Individual work ability profile

- A.** Subjective assessment of one's own disability and potential in life
- B.** Objective assessment of work ability

Assessment of work ability in terms of physical, sensory and psychosocial abilities, professional competence

WORK PASSPORT

PHYSICAL AND FUNCTIONAL CAPABILITIES		Assessment standard				
		low				high
		1	2	3	4	5
1.	Hand grip force					
2.	Pinch grip force					
3.	Maintaining balance					
4.	Forearm and hand movement scope					
5.	Sorting objects by hand					
6.	Assembly line work					
7.	Whole-body movement scope					
8.	Hand-eye coordination test					
9.	Eye-hand-foot coordination					
10.	Manual function and coordination					
11.	Lifting and muscular force capacity					
12.	Hand and finger dexterity					
13.	Reflexes					

WORK PASSPORT

SENSORY ABILITY		Assessment standard				
		low 1	2	3	4	high 5
1.	Aural ability					
2.	Visual ability – sight acuity					
3.	Visual ability – color sight					
4.	Mesopic vision					
5.	Vision after glare					
6.	Stereoscopic vision					

Relationship between the international classification of diseases and health problems (ICD) and the international classification of functioning (ICF)

ICF supplements ICD

Diseases

(illnesses, disorders, injuries) and related health problems

Functioning

on the level of the body (handicaps), the person (activities) and the person in social (participation) taking into account environmental factors

Comprehensive attitude towards work ability assessment aims at defining **not the limitations**, but the **abilities** of the patient,
thus
increasing the chances of professional activation and mobility for the persons with disabilities.

The implementation of a comprehensive assessment of work ability will be used to:

- 1) support the disability assessment system
- 2) support people with disabilities in their choice of occupation
- 3) occupational rehabilitation of people with various types of acquired disabilities (e.g. after accidents at work)
- 4) determining the direction of vocational reorientation of people with disabilities

**Methods of determining
the premium for insurance against
accidents at work for companies
in Poland**

INSURANCE PREMIUM

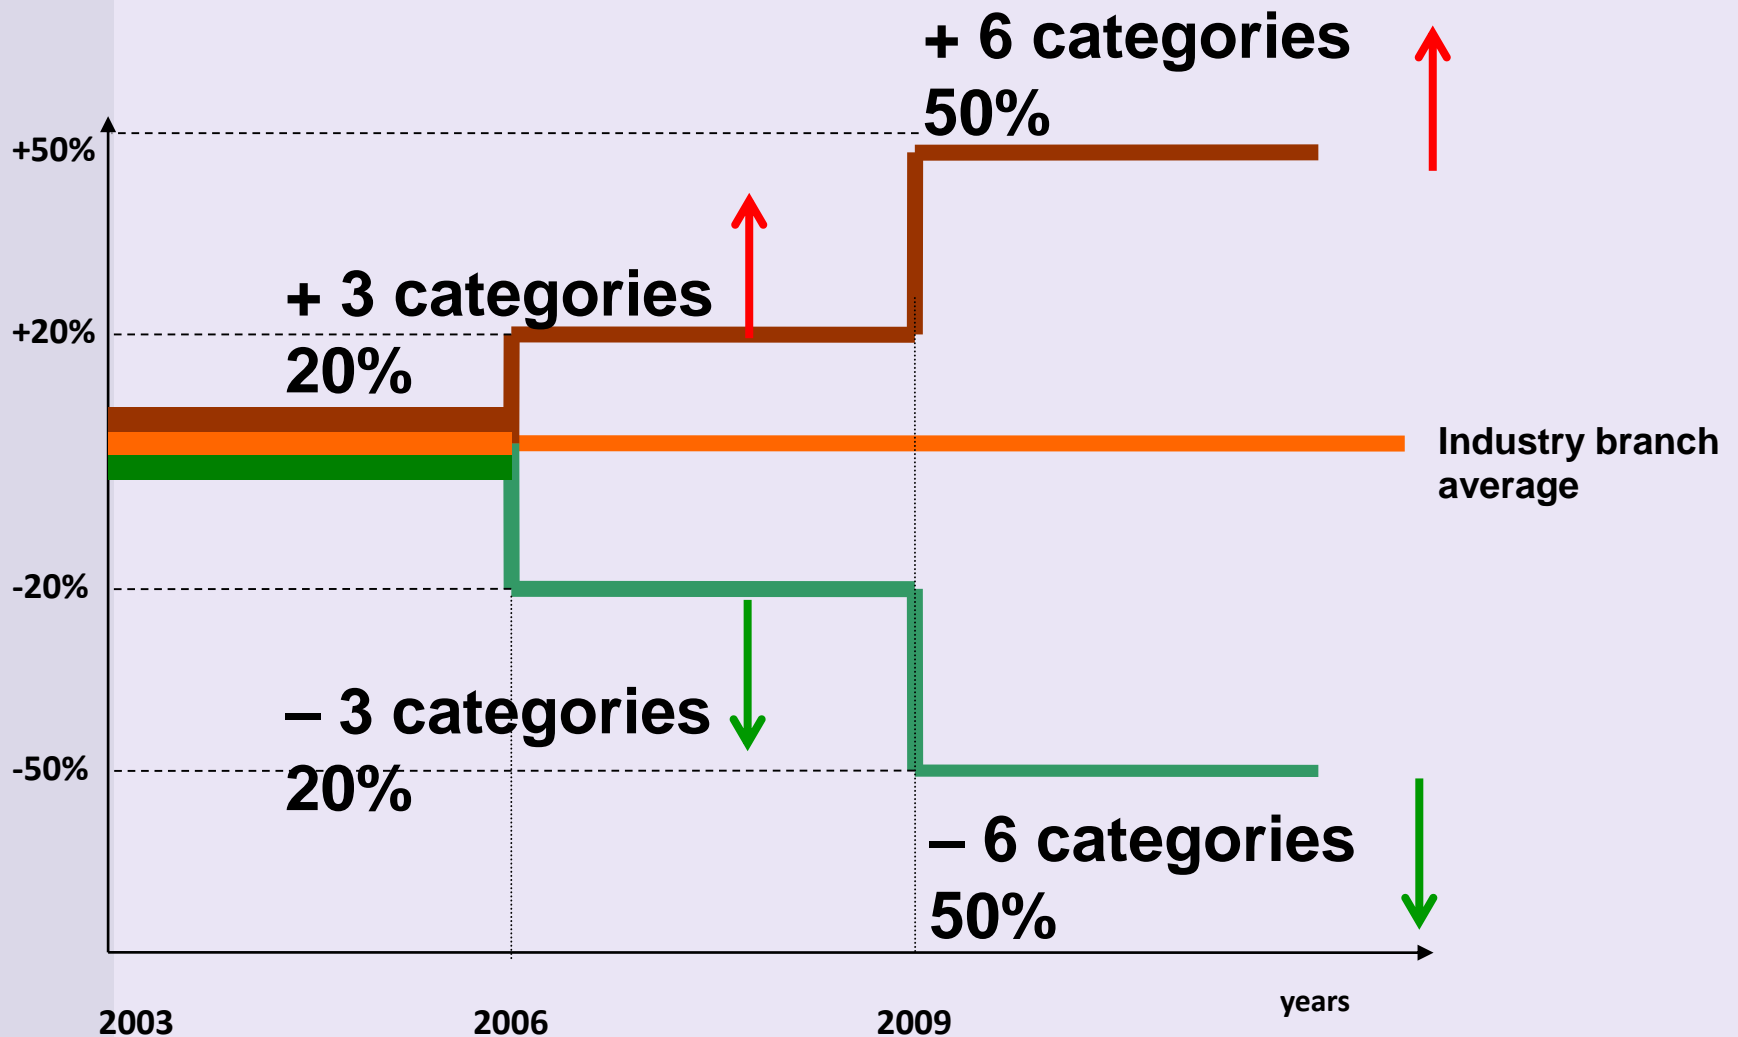

The insurance premium depends on rates (per 1,000 workers) of

- accidents at work (total)
- fatal and serious accidents at work
- persons working in hazardous conditions

Differentiation of insurance premium rate of enterprises in relation to accidents at work and number of people exposed to hazards

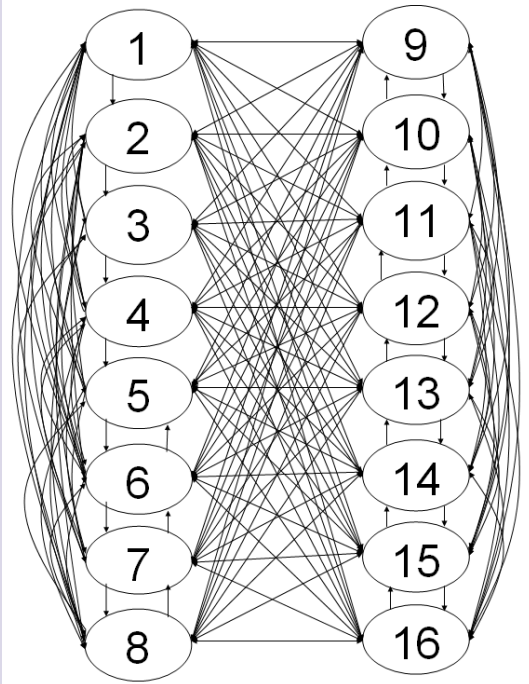

2003

2006

2009

years

Modelling Occupational Health and Safety Management System with Fuzzy Cognitive Maps (FCM)

FCM model presenting influences between processes (1-15) and safety performance (16) in the OSH MS

Safety performance after the improvement of individual processes

Out of all processes in the OSH MS the improvement of safety leadership affects safety performance most

3) shaping a high level of safety culture among the employers and employees by developing the system of education and information on OSH requirements

Educational materials

EDUCATIONAL MATERIALS FOR CHILDREN

Pilot versions of programmes with guidelines for conducting classes (in preschools and classes I-III of primary schools) according to scenarios included in the "Safe Preschools" and "Safe School" programmes.

Centre for Assessment and Improvement of OSH Competence

Certification of competence:

- **OSH lecturers**
- **OSH specialists in the measurement of working conditions parameters**
- **OSH MS auditors**
- **OSH consultants in SMEs**

Offices of the Members of OSH expert network and Regional OSH consulting centres certified by and cooperating with CIOP-PIB

- Members of OSH network of experts
- Regional OSH consulting centres

Educational activities in 2017

Development of:

- ***Rules for the recognition*** of qualifications acquired in the EU Member States and EFTA States for the exercise in Poland of regulated professions in the field of health and safety at work (European Free Trade Agreement)
- ***Requirements in the field of knowledge and skills*** of performing the following professions in Poland: specialist and occupational health and safety technician.

Dissemination of results

Publishing activity continuous publications

IF: 0.648

Dissemination of knowledge in the field of safety and health at work during industry, domestic and foreign undertakings, including fairs, conferences, seminars

Active participation in:

- **2 foreign trade fairs** (*Barcelona, Düsseldorf*)
- **3 exhibitions** accompanying national conferences

Organised:

- **13 conferences, 6 seminars i 2 workshops** for employers and employees and health and safety representatives

Two-year European campaigns

**Healthy workplaces campaign 2008 – 2009
on Risk Assessment**

**Healthy workplaces campaign 2010 – 2011
on Safety Maintenance**

**Healthy workplaces campaign 2012 – 2013
„Working together for risk prevention”**

Two-year European campaigns

Healthy workplaces campaign 2014 – 2015
„Healthy workplaces manage stress”

Healthy workplaces campaign 2016 – 2017
„Healthy Workplaces for all ages”

Healthy workplaces campaign 2018 – 2019
„Healthy Workplaces manage dangerous substances”

Competitions

4 competitions on safety and health:

- safety poster competition
- art competition
- photography contest
- film contest

Print-outs of:

- safety posters – 3 thousand
- posters catalogues – 0.6 thousand of copies
- postcards with posters – 1.5 thousand of copies
- „Wasz Kurier Ilustrowany O!ZNAKI PRACY” – 0.5 thousand of copies

Recipients of programme results – 62800 persons

2017

CONCLUSIONS

1. **Poland**, as a member of the **European Community since 2004**, has harmonised its **OSH legal regulations and practices with those of the Community.**

CONCLUSIONS

2. **The National Programme „Improvement of Safety and Working Conditions” has been confirmed by „National Strategies Mapping” report prepared by EU-OSH (2016)**

QUO VADIS ?

21st CENTURY

New tendencies

- **transfer from the manufacturing society to the consumption and/or information society**
- **increased individualism at work and related changes in work relations**
- **the emergence of new, complex types of risk, such as occupational stress, mobbing**

Organizational changes on the job market

- **part-time work**
- **fixed-term contracts**
- **computerized supervision**
- **knowledge-based management**
- **multi-directional competences**
- **an increasing number of SMEs**

**We must take up these challenges
together as members of the European Union,
and our OSH-dialogue
is an excellent example.**

**THANK YOU
FOR YOUR
ATTENTION**
