

Saskia Osing,
Chairwoman
of Basi

Dear Sir or Madam,

The world of work is undergoing profound change – and the 39th International A+A Congress 2025 takes account of current developments in the field of safety and health in this context. It addresses key topics for the future: artificial intelligence in occupational safety, strategies for

sustainable and climate-friendly workplaces, mental health, ergonomic work design and prevention in small and medium-sized enterprises (SMEs). This year, we are even dedicating a special area at the exhibition centre to Vision Zero with its goal of 'zero accidents at work or work-related illnesses'.

Once again, the focus of the A+A Congress reflects the challenges that companies face today – and our experts offer innovative solutions. Digital tools and AI are opening up new avenues for humane work design and effective prevention. At the same time, mental stress, biological risks and the effects of climate change are coming into sharper focus. Risk assessment remains a key tool in this regard, one that is being further developed through modern technologies. Occupational safety and occupational health specialists make a decisive contribution to implementation – one of our primary goals is to support them in this endeavour.

The A+A Congress 2025 offers a four-day platform for exchange, networking and inspiration – from research to practice, from politics to business. I cordially invite you to join us in actively shaping the future of safety and health at work.

Yours sincerely, Saskia Osing
